

Cre8ive Thought is an initiative from Mark Nijhof, an experienced Microsoft .Net **C#** developer with a solid knowledge about **Object Oriented (OO) design** and **software craftsmanship** in general.

Our vision

The vision of Cre8ive Thought is to help make the software industry more professional and focused on **quality**. We will do this by promoting and **teaching** the principles of **Software Craftsmanship** to developers and managers. We will work together with you to improve your software development process.

Services

Writing **quality software** is hard. Many software projects have a fast initial pace that slows down as time passes. Using solid **craftsmanship principles** and **practices** ensures a fast and steady pace.

Development

Whether you need extra manpower to help deliver your software or a team lead to take responsibility for the entire project, we will use our **knowledge** and **experience** to make sure the result is **well-crafted software**.

Coaching

Need help **improving** your **teams** software development practices and understanding, or want an **architectural review** of your code? We are available for coaching either through **design sessions** or working alongside the team using **pair programming**.

Introductions

Sometimes you just want a quick **introduction** into a new **technology**, **technique** or **methodology**. We can provide a quick introduction and then go into the details on how this may be applied in your code. Nothing helps understanding something new better than seeing it applied to your own problem domain.
